

# IoT Elderly Care Solution

Group sddec19-18: Robert Guetzlaff, Tyler Borchert, Siyuan Zeng, Nidhi Dalvi, Jared Griffin

Client: Optical Solutions

Advisor: Daji Qiao

Team Website: <http://sddec19-18.sd.ece.iastate.edu/>

# Outline

- Focus and Goal
- Research
- Plan and Progress

# Focus & Goal

# Problem Statement

- How can senior citizens stay in their homes longer?

[1]

# Previous Groups

## Autonomous Animals

- Built the initial system prototype for collecting kitchen usage data
- Ran into a number of issues reliably collecting kitchen data

## Guardians of the Grandparents

- Created an Android application consuming stored data
- Installed flow meter and smart outlet

[21]

# Functional Requirements

- Sensors generate data matching our expected model
- Display sensor event data through a web application
- The sensor solution is wireless with a battery life of 1-2 years
- Logic detects if a resident has a health anomaly

[8]

# Non-functional Requirements

[22]

Reuse

[23]

Non-Invasive

[20]

Timely

[19]

Loss of Power

# Constraints & Considerations

Cost

[2]

Sensor limitations

[3]

Inherited components

[4]

# Research

# Market Survey

[5]

# Potential Risks & Mitigation

Connection to the Cloud Environment

[6]

Remote Test Environment

[7]

# Resource/Cost Estimate

- AWS Cloud Resources
  - EC2 Server: \$0.0208/hr [11]
  - RDS Database: \$0.017/hr [12]
  - S3 Bucket: \$0.0237/GB [13]
- Sensors:
  - \$29 per TI Sensor Tag
  - \$35.64 per Raspberry Pi 3

# Plan & Progress

# Member Roles & Responsibilities

- Jared Griffin
  - Web Application Engineer, Project Website Maintainer, GitLab Administrator
- Nidhi Dalvi
  - Hardware Engineer, Meeting Facilitator
- Tyler Borchert
  - Hardware Engineer
- Siyuan Zeng
  - Behavioral Logic Server Engineer
- Robert Guetzlaff
  - Behavioral Logic Server Engineer and Database Management

# Functional Decomposition

[8]

Sensors/hardware

[9]

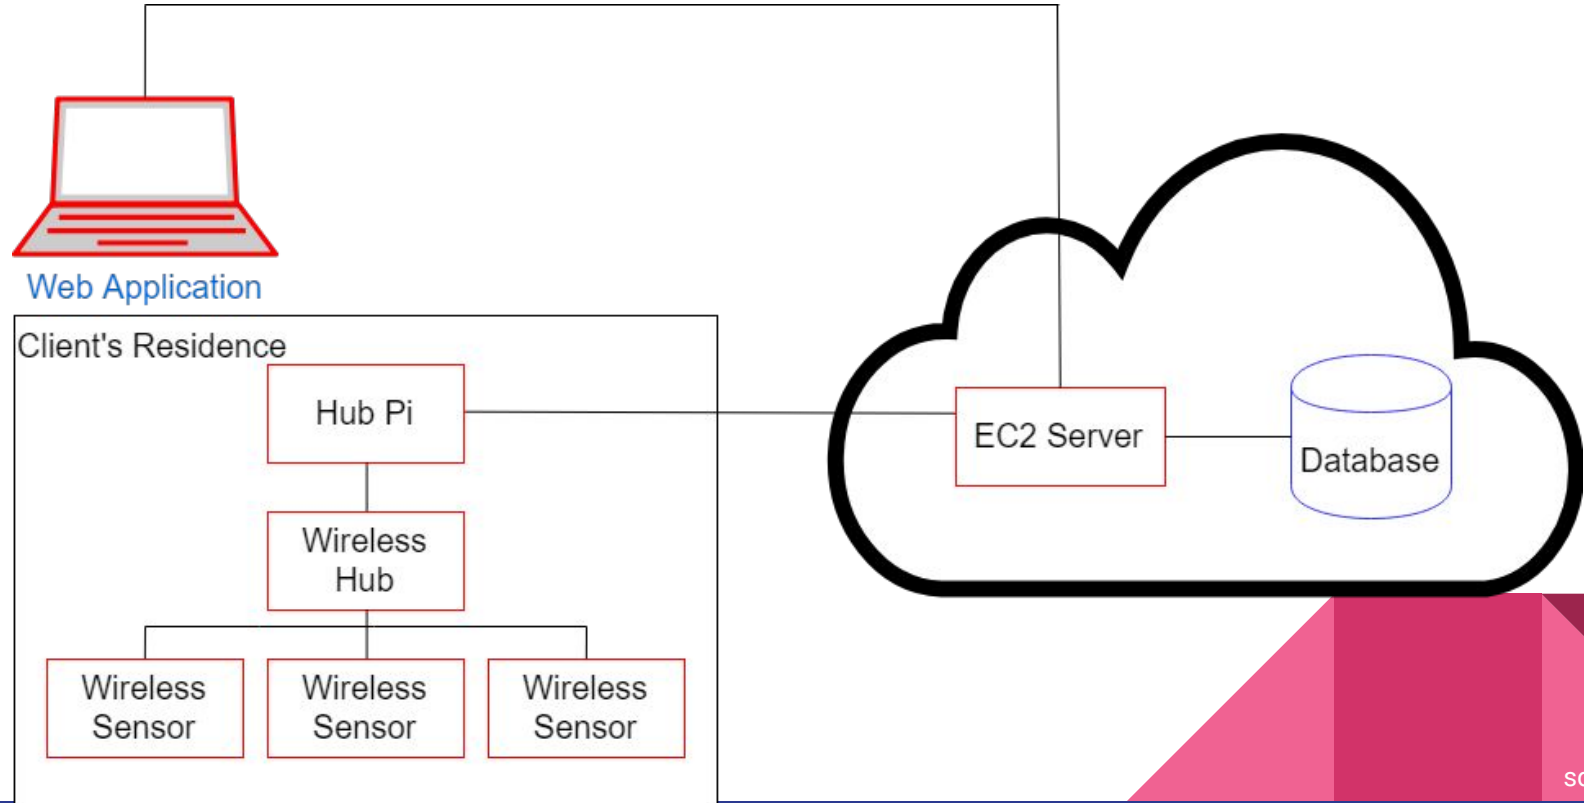

Behavioral Logic

[10]

Web Application

# Detailed Design

# Test Environment

# Technology Used

- Technology Platforms

- AWS
  - EC2
  - RDS
  - S3

- Hardware

- Raspberry Pi

- TI sensor tag

- Software

- Web Application
  - React
  - Jest
- Logic Server
  - Spring Server
  - Eclipse
- Hardware
  - VNC
  - Python

# Prototype Implementations

- Sensor hardware
- Logic Server
  - Kitchen activities monitor.
- Web Application

## Overview

**Breakfast**

Lunch

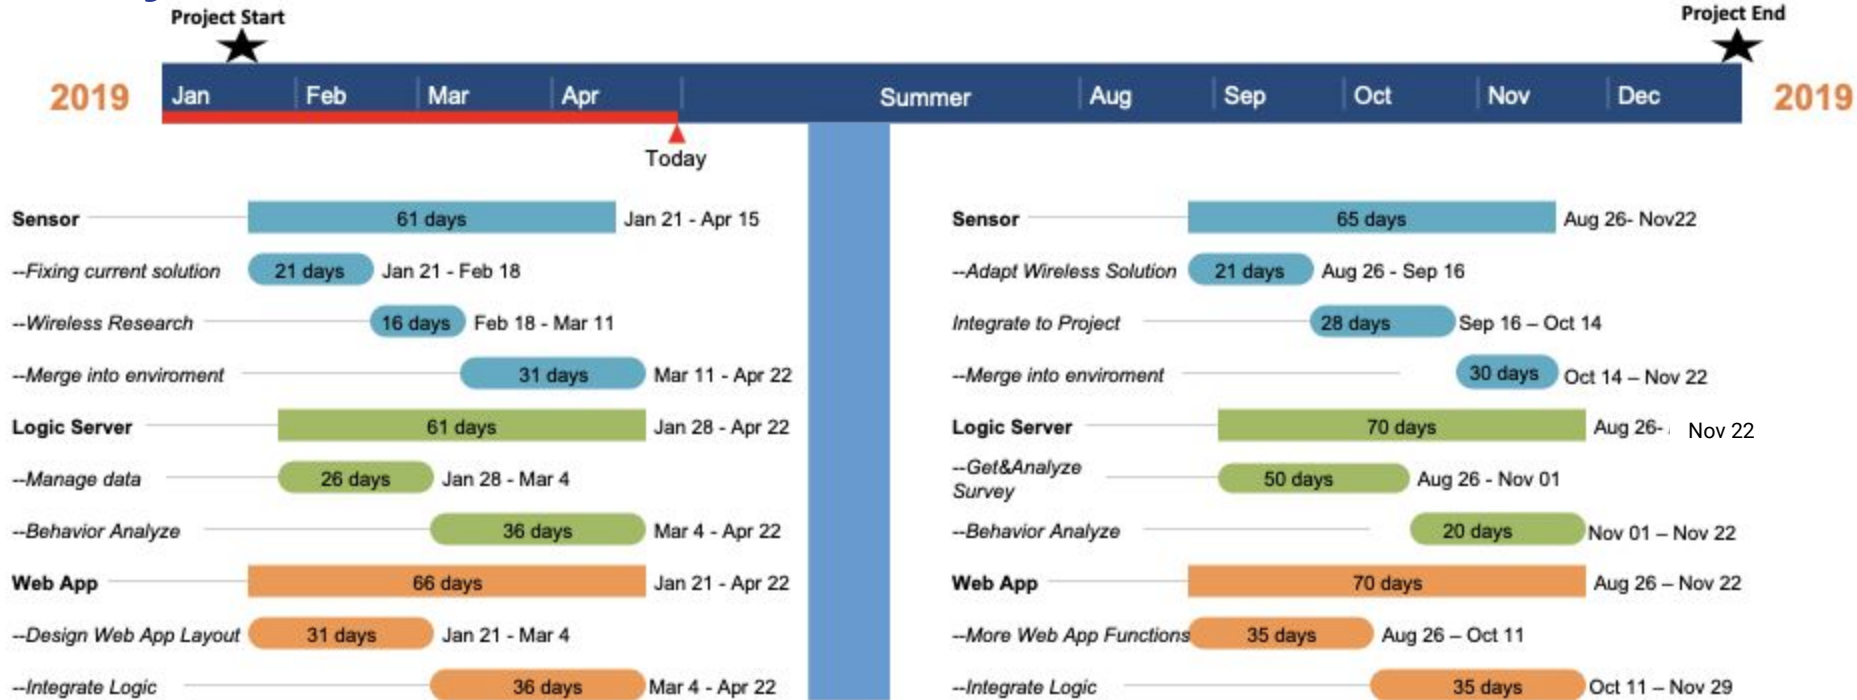

Supper

# Project Milestones

- **Sensor**
  - Fixing current solution and test
  - Research and implement a new wireless solution
  - Implement it into testing environment
- **Logic**
  - View raw in a human readable format
  - Prediction for breakfast, lunch and dinner
- **Web Application**
  - Displaying raw data
  - Graphing data to make it more understandable
  - Integrate logic assumptions

# Project Milestones & Schedule

# Test Plan

- **Sensor**
  - Unit testing with unittest
  - Testing the code using the prototype
- **Logic Server**
  - JUnit Test (For Unit tests.)
  - Mockito Test (For Integration Tests.)
- **Web Application**
  - Unit Testing
  - Acceptance & Integration Tests

# Project Status

- **Sensor Hardware**
  - Fixed previous solution
  - Researched a wireless solution for next semester
- **Logic Server**
  - Kitchen activities monitor
  - Meal prediction logic.
- **Web Application**
  - Project bootstrapping
  - Continuous integration workflow
  - UX mockups being developed for next semester

# Plan for next semester

- Sensor hardware
  - Implement wireless solution into prototype
  - Replace old solution with wireless
- Logic Server
  - Make more survey to get detailed information for implementing logic.
  - Better logic algorithm.
- Web Application
  - Implement the UX mockups created this semester
  - Integrate behavioral logic

# Summary

- Helping monitor the health of senior citizens
- System addresses this by:
  - Collecting data from the seniors' homes
  - Analyzing their behavior
  - Displaying health information in a web application

[14]
