

IoT Elderly Care Solution

Group sddec19-18: Ameliorate

Members: Robert Guetzlaff, Tyler Borchert, Siyuan Zeng, Nidhi Dalvi, Jared Griffin

Client: Optical Solutions

Advisor: Daji Qiao

Team Website: <http://sddec19-18.sd.ece.iastate.edu/>

Outline

- Focus and Goal
- Research
- Implementation
- Testing
- Results

Members

- Jared Griffin
 - Web Application Engineer, Project Website Maintainer, GitLab Administrator
- Nidhi Dalvi
 - Hardware Engineer, Meeting Facilitator
- Tyler Borchert
 - Hardware Engineer
- Siyuan Zeng
 - Behavioral Logic Server Engineer
- Robert Guetzlaff
 - Behavioral Logic Server Engineer and Database Management

Complications

- Sixth Group Member

Focus & Goal

Problem Statement

- How can senior citizens stay in their homes longer?

[1]

Previous Groups

Autonomous Animals

- Built the initial system prototype for collecting kitchen usage data
- Ran into a number of issues reliably collecting kitchen data

Guardians of the Grandparents

- Created an Android application consuming stored data
- Installed flow meter and smart outlet

[20]

Functional Requirements

- Sensors must be wireless and have a lifespan of 1-2 years.
- The data from the sensors must be transmitted to our server.
- The logic system can take in a set of recorded sensor data and determine to a degree of certainty if a meal has been prepared.
- The resident events, meals prepared or skipped, must be displayed on a web application.

[9]

Non-functional Requirements

[21]

Reuse

[22]

Non-Invasive

[19]

Timely

[18]

Loss of Power

Constraints & Considerations

[2]

Cost

[3]

Sensor limitations

[4]

Inherited components

[24]

Minimum Viable
Product

Research

Market Survey

[5]

Potential Risks & Mitigation

Connection to the Cloud Environment

[6]

Remote Test Environment

[7]

Implementation

Functional Decomposition

[9]

Sensors/hardware

[10]

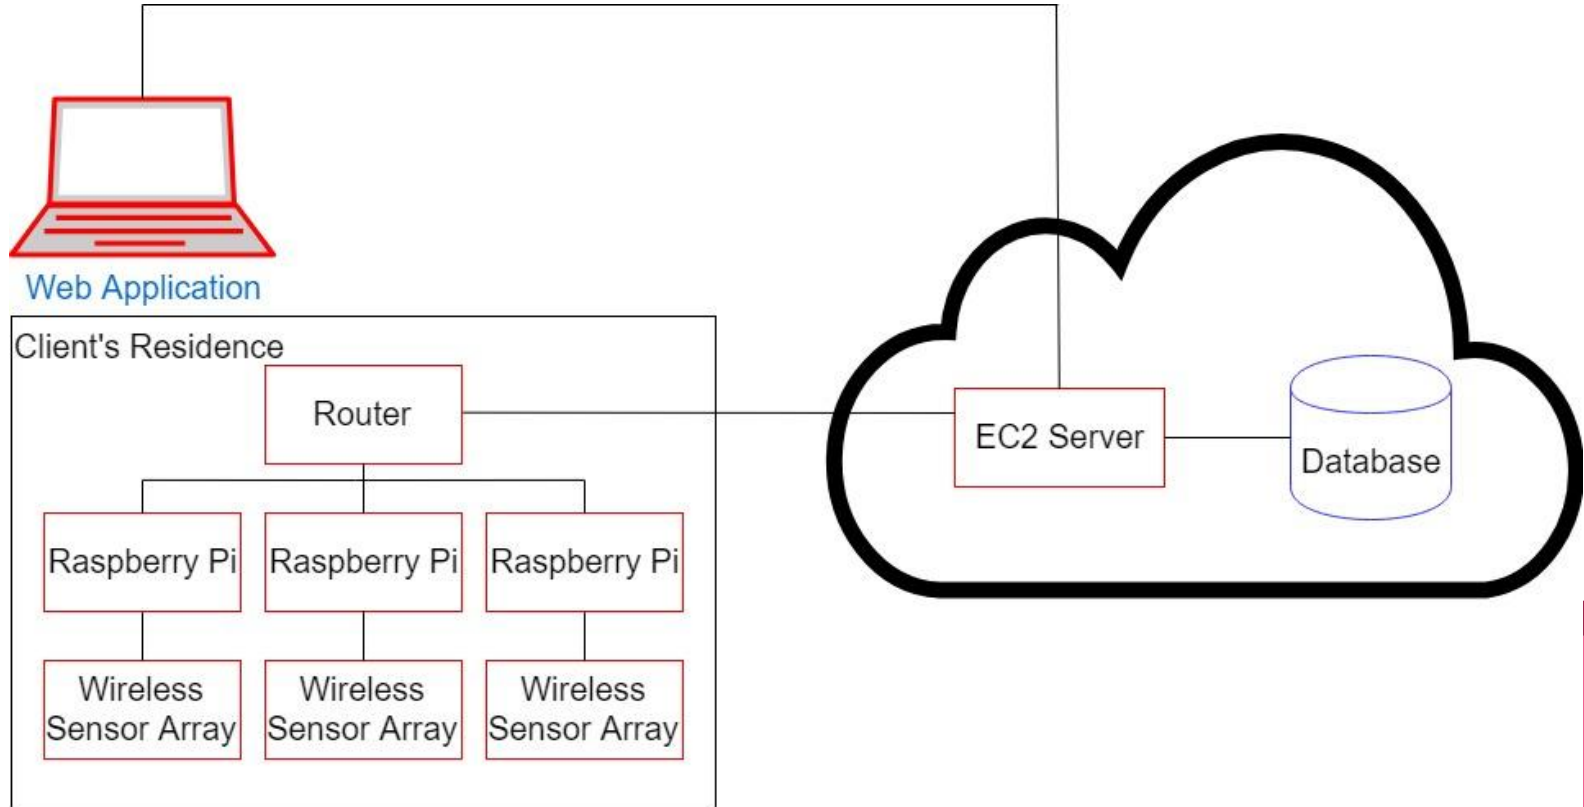

Behavioral Logic

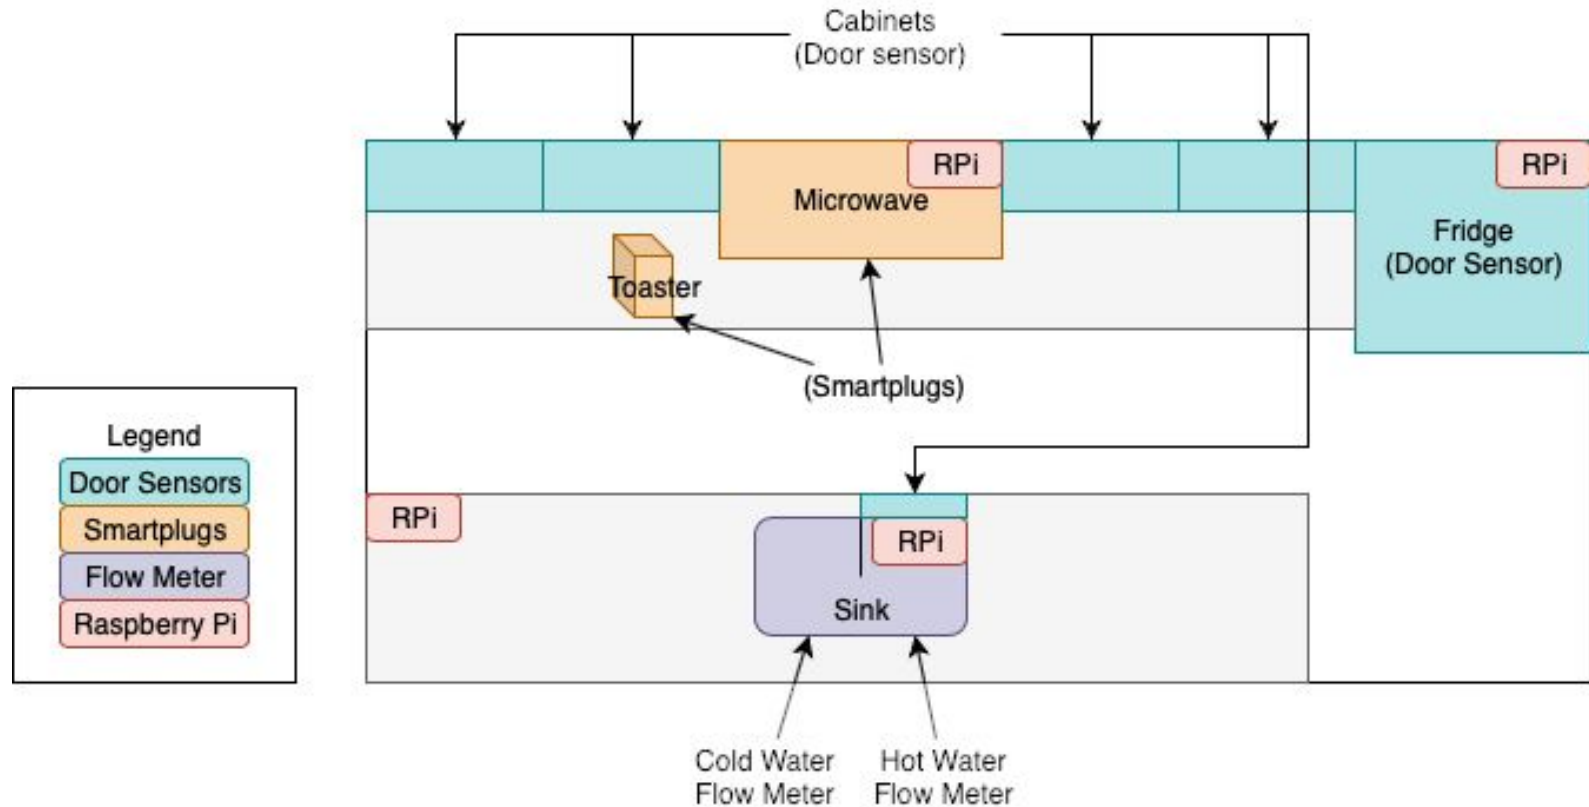

[11]

Web Application

Detailed Design

Test Environment

Technology Used

- Technology Platforms

- AWS
 - EC2
 - RDS

- Hardware

- Raspberry Pi
- TP-Link Smart Outlets

[12]

TI sensor tag

[13]

- Software

- Web Application
 - React
 - Jest
- Logic Server
 - Spring Boot
 - Java
- Hardware
 - VNC
 - Python

Resource/Cost Estimate

- AWS Cloud Resources
 - EC2 Server: \$0.0208/hr [11]
 - RDS Database: \$0.017/hr [12]
- Sensors:
 - \$29 per TI Sensor Tag [27]
 - \$35 per Raspberry Pi 3 [25]
 - \$21.96 Smart Outlet [26]

[8]

Design Tradeoffs

Hardware:

- Off the shelf solution
 - Costs more than a DIY solution.
- TI
 - Cheaper, but has bad documentation
- Open/Close sensing
 - Looked at peaks and valleys in data.
 - Not as accurate as integration techniques.

Logic:

- Machine learning
 - Not enough sensor data to implement a machine learning feature
 - Client wanted us to use hard-coded boolean logic

Hardware Implementation

Sensors

- Sensor tags are connected through a python script which is running on a raspberry pi.

Outlets

- Plugged in to the microwave, toaster, and electric kettle.
- Communicates to raspberry pi via HTTP requests

Data Relay

- Set up as a task to be run every 10 minutes.

Logic Implementation

Spring MVC Project

- Interpret data in database to human readable format.
- Analyze the data using the logic algorithm.
- Provides the services for web application to use.

Logic Algorithm

- Implemented by the survey collected from Bob.
- Implemented by the data collected by sensor.

User: Bob
Overview
Graphs
Breakfast
Wake Up

Last Activity: 2:15pm

Activity	Start Time	Duration	Meal Ate
Breakfast	8:20am	23 minutes	OK
Lunch	11:45am	47 minutes	OK
Supper	X	None	NO

Calendar

Date: 10/1/2019

<Calendar in this space>

Details

Activity	Water Usage	Electricity Usage
Breakfast	215ml	2426W
Lunch	198ml	2318W
Supper	63ml	1248W

Activity Log

All

Breakfast

Lunch

Supper

- ▶ 1:15pm-1:30pm: 1 event occurred
- ▶ 12:15pm-12:30pm: 1 event occurred
- ▼ 11:30am-11:45am: 3 events occurred
 - 11:39am: Cutlery drawer was opened and closed
 - 11:32am: Microwave was used
 - 11:31am: Freezer was opened and closed
- ▶ 11:15am-11:30am: 1 event occurred
- ▶ 11:00am-11:15am: 1 event occurred
- ▶ 10:15am -10:30am: 1 event occurred
- ▶ 9:00am-9:15am: 1 event occurred

Problems

Hardware

- Bluetooth connection issues
 - Worked for x amount of time and then disconnects on its own (Resolved).
- Loss of a group member
 - Got us behind on the implementation of hardware.
 - Battery Life

Problems

Web Application

- Intense Focus on Prototypes
- Lacking CI Infrastructure from ETG

The background is a solid pink color. In the top right corner, there is a decorative graphic consisting of several overlapping geometric shapes, including triangles and squares, in various shades of pink and magenta.

Testing

Testing - Kitchen Sensors

TI Sensor Tags:

- Iteration Testing with prototypes
 - Creating a prototype that served a smaller function and physically testing it.
 - Once it passed physical tests, then it would get added to the overall program.
- Physical Testing
 - This involved placing the sensors into a testing environment and driving the code.
 - If the output was expected, then we would say it passed.

Data Relay:

- Created Test data to verify local entries are transmitted and deleted

Testing - Smart Outlet

- POST Request Testing
 - Generated POST requests and ensured data stored matched sent
- Stability Testing
 - Plugged outlets in and monitored for two weeks
 - Monitored reported usage

Testing - Logic

- JUnit Tests & Mockito Tests
 - They are used to make sure each line of the code works properly. They are used to test independent and dependent classes respectively.
- Postman
 - Postman is used to test the communication between frontend and the logic server.

Testing - Web Application

- Unit Testing
 - Built using test-driven development
- Unit test suite ran on continuous integration
 - Tests run every time we make changes to the web application

Results - Web Application

- Have an overview section
- Built to integrate cleanly with the logic server's data

Hi Jared!

Resident: Bob

Overview

Last Activity: 2:15pm				
Activity	Start Time	Duration		Meal Ate
Breakfast	6:53AM	20 Minutes	✓	
Lunch	11:53AM	30 Minutes	✓	
Supper	5:53PM	25 Minutes	✓	

Summary

- Helping monitor the health of senior citizens
- System addresses this by:
 - Collecting data from the seniors' homes
 - Analyzing their behavior
 - Displaying health information in a web application

[14]
